

Michael Feldman has covered the high performance computing industry for 10 years, first as the managing editor of HPCwire, then as a market research analyst at Intersect360 Research. During that time, he established himself as trusted voice in the HPC community. Prior to his work as a journalist and industry analyst, Michael was a software engineer, a career that spanned 25 years, and included projects in compiler/runtime platforms, software development tools, and real-time embedded systems. He is currently the editor of TOP500 News, where he reports on current happenings in the supercomputing community.
