

Peter Braam is a scientist and entrepreneur focused on large scale computing. After obtaining a PhD in mathematics under Michael Atiyah at Oxford, he was an academic at several universities including Oxford, CMU and Cambridge. One of his startup companies developed the Lustre file system, which is very widely used, and many other products he designed were sold to major corporations. From 2013, Peter has been contributing to architecture for data processing in the SKA telescope, and is researching and designing other solutions for data intensive computing.
