Dr Ewald van der Westhuizen
Stellenbosch University

Ewald van der Westhuizen is a postdoctoral fellow at the Digital Signal Processing Group at the Department of Electrical and Electronic Engineering, Stellenbosch University. After some years in industry working for a mobile content delivery company, he returned to academia. At Stellenbosch University, he contributed to satellite telecommunication research projects as a project engineer. Shifting his attention to the field of speech and language processing, his PhD research focussed on the language modelling of mixed-language speech for automatic speech recognition in South African languages. He is currently involved in a project funded by the United Nations which uses speech processing and machine learning technology to aid humanitarian relief efforts in Africa.
